New Product Information—For Immediate Release

### **No crack, peel or chips on painted parts with this cart**

*Kiting cart developed by Creform has a unique cantilevered bar arrangement designed and built for transporting irregularly shaped fabricated parts*

Greer, SC—Painted parts are the hardest parts to keep scratch-free and mar-free in the manufacturing environment...particularly when the parts need to be delivered from a paint room to an assembly area. Creform Corporation has designed and built a cart that helps manufacturers do just that. The cart is designed to hold small batches of parts on two sides of the cart. The open design makes all parts visible, assisting in visual inventory management, particularly useful when a mix of part sizes and shapes exist.

For damage-free handling, each of the shelf levels feature two cantilevered bars (pins) that extend out both sides of the cart to safely and securely hold the parts. The pins feature an end-stop which prevents the parts from sliding off the cart during transport.

The cart features five adjustable shelves all in a comfortable ergonomic position. The design of the cart makes it easy to add, reduce or reposition the shelves. It has four 3" dia. swivel casters for easy positioning and maneuverability with two of the casters that lock. The swivel feature of the casters allows the cart to be easily rotated in order to fill one side once the other is full.

The dimensions of the cart shown, built with 28 mm pipe, is 30" x 30" base with 65" height. It has a load capacity of 350 lb. while angle bracing ensures for rigidity and durability. Creform is able to custom configure the dimensions of the cart with its system of metal pipe and joints. The modular design allows the user to configure the cart to his needs, and to change when the demand changes. Further a wide variety of pipe colors are available.
