New Product Information—For Immediate Release

Hello Dolly...well hello Dolly.

Creform-built cart allows manufacturer to put dolly "back where it belongs."

Greer, SC—It's one thing to use dollies in your operation. It's another to find a way to store them. Creform engineers not only created the dollies for one of its long-time customers, it also created a storage cart to hold and transport batches of dollies.

The Creform GN Series of Modular Cart dollies allows the user to easily 'put wheels' on just about anything they need to move regularly. They are ideal for moving boxes of components, parts, totes and equipment. They help in maintaining safe and clean work areas by providing a simple and maneuverable platform for keeping containers off the floor. A unique feature of the dolly design is its interlocking ability which allows several to be locked together to create a larger platform. An added bonus is that no tools are required for connection.

Molded-in handholds make the dollies easy to carry and they are designed to be stacked for compact storage. The weight of a GN-900 dolly is 11.5 lb. (5.2 kg) with nylon wheels. 12.5 lb. (5.7 kg) with rubber wheels. They are small enough to fit in the trunk of a car and light enough for anyone to handle. Not only are the dollies ideal for industrial use, but they also can be used in the moving industry, assembly/warehouse operations and in DIY applications.

As for the specially designed and built cart, the customer can position the cart in strategic locations throughout its facility and provides a way to consolidate unused dollies in a neat and orderly fashion. It is also a way to move a batch of dollies to the point of need.

The particular design pictured holds ten of the smaller Creform GN-400 dollies, and with an open front, allows for easy load/unload. The cart ensures the dollies are held

in position securely during transport. The design also allows for a GN-900 dolly to be hung vertically around any of the three sides of the cart for added flexibility. The cart has a load capacity of 250 lb.

The Creform System is used to create an array of material handling and efficiency enhancing devices and is a proven component in continuous improvement and Lean Manufacturing programs. The company partners with customers in developing and implementing these programs.
